- Advance Java

Projects

Pharmacy Management,
Core Java(Console Based Project)

- The pharmacy management system is a project developed to automate medical stores activities and improve their productivity. This helps pharmacies organize, manage and secure drug information efficiently.
- A pharmacy management system can also help you keep track of your drug supplies . This can also improve quality and customer satisfaction ratings, as well as keep , ,medicines from going bad.
- Language used:- Core java, mySQL.

Blood Bank Management System, *mySQL Project*

- Blood Bank Management System is a SQL based mini project.
- It is designed to store , process, retrieve information concerned with the administrative inventory management within a blood bank.
- The purpose of this is to simply automate the process of searching for blood, to improve old system, increase the efficiency of the database, give chance to the public to discover more about blood donor.

Online Book Store, *Advance Project*

- Online Book store is an online web application where the customer can purchase books online. Through a web browser the customers can search for a book by its title or author, later can add to the shopping cart and finally purchase using credit card transaction.
- It is easy to access and use for the customers to place their orders for the books and get delivered.It is an organized book store according to the genre.
- The Signup,Login details are stored in the database and checked when they login and until they don't logout the session is active.
- In this project i have used HTML, CSS,JSP,Servlet,mySQL, and Java Concepts.
